UPGRADE TO HIGH PERFORMANCE!

New Fin Spiral is designed with an extra quarter turn to allow for a very smooth, even, and controlled discharge.

Solid Roller Track is lighter and stronger than hollow designs, providing 350% more contact surface area and eliminates flexing and cracking.

VS.

Straight Cone Taper allows for a smooth discharge with virtually no surging, while allowing maximum discharge performance.

High Capacity head and belly sections allow for 25% more material in the mixing bowl.

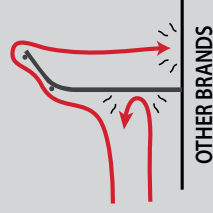

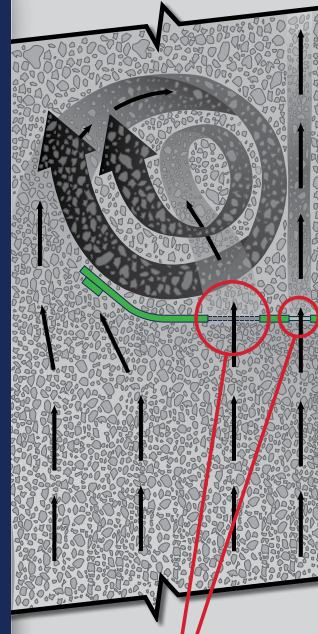

Fabricated A.R. Steel Head
More Wear Resistant
 Up to 300% more wear resistant than typical Gr. 50 spun heads.
More Usable Steel
 1/4" and 5/16" heads are true nominal thickness unlike spun heads that get thin on the radius.
Lighter
 1/4" heads are 172 lbs. lighter than 1/4" spun heads.

Ball Buster paddle system is strategically located for breaking apart floating dry balls.

Con-Tech's patent pending EcoFin technology allows concrete to flow through the mixing fins then folded into the mix coming over the top of the fin. This provides a much more homogenized mix in a much more efficient manner than conventional designs.

Mixing holes allow concrete to pass through the fin along the drum skin providing a barrier from the mixing chamber. Reducing the wear on your mixing fins and drum skin.

Con-Tech's patent pending A.R. steel 'lip doubler' provides ultimate wear protection.

It's What's On The Inside That Counts!
