

Anti-slip Platen & Rubber Pad System

P/N PM10152 (5") or PM10150 (8")

Stops Rubber Pads from Slipping!

Domaille Engineering's EZ-Lock rubber pad anti-slip system is part of a process control system and consists of a specially modified optical fiber polishing machine platen and Gold Series rubber pad. The system uses keyed features to secure the rubber pad, effectively eliminating the possibility of the pad slipping.

Manufactured to Domaille's exacting high quality standards

Benefits at a Glance:

- Special designed optical polishing machine platen with locking studs
- Domaille Gold Series rubber pad modified with special keying features
- Compatible with Domaille Glass Plates
- No wringing of pad to platen is necessary
- Can be retrofitted to any Domaille Engineering optical fiber polishing machine.
