SECTION B. REBATE APPLICATION CHECKLIST

Use this checklist to complete the steps to receive your rebates:

❑ **1.** Read the following terms and conditions to determine if you are eligible for a rebate:

- Only one service address per application.
- Rebates are intended for customers, not contractors or builders.
- The Utility reserves the right to apply rebates to past due accounts. Rebates $75 and under will be applied to your account. Rebates will not exceed the purchase price.
- Energy-efficient equipment must be connected to an electric service supplied by Austin Utilities, Owatonna Public Utilities, or Rochester Public Utilities and is subject to inspection.
- Purchase and install **NEW** products. Reconditioned, refurbished, or second-hand equipment is not eligible for a rebate. Products replaced under warranty or provided through a repair/replacement service agreement are not eligible for a rebate.
- Equipment installations must meet our Minimum Efficiency Requirements to qualify for a rebate. Air-Conditioning, Heating, and Refrigeration Institute (AHRI) and ENERGY STAR® standards are used. The Utility reserves the right to reject any rebate application submitted as a result of work performed by a contractor who has failed to adhere to the terms and conditions established for the rebate program. Contractors must be licensed if applicable.
- Due to limited funding, this rebate offer can be withdrawn at any time without notice. Applications will be processed on a first-come, first-served basis. All applications from this year's purchases (2025) must be received by March 31, 2026.
- Rebates can only be offered on equipment that is installed while funding is in effect. In the event our program is discontinued due to depleted funds, we will not provide a rebate for items installed between the discontinued date and the end of that year.

❑ **2.** Complete the application, making sure to fill out all required sections in detail. Allow 6-8 weeks for processing. Missing or incorrect information will increase the processing time.

❑ **3.** Include a final, detailed copy of the original sales receipt, invoice, or picking slip showing the customer name, date of sale, manufacturer name, model number, size, and date of installation. **All HVAC equipment must have serial and model numbers listed on the invoice.**

❑ **4.** For FURNACE FAN MOTOR REPLACEMENTS rebates, applicant must also include documentation that the replacement motor is an Electronically Commutated Motor (ECM) or equivalent.

❑ **5.** Sign the application.

❑ **6.** Information contained in this rebate application may be shared with the Minnesota Department of Commerce and our co-op partners.

❑ **7.** Submit completed forms and required documentation to your utility provider:

2025 ELECTRIC HVAC – USED FOR HEATING AND COOLING

AIR SOURCE HEAT PUMPS (ASHP) – DUCTED
USED FOR HEATING AND COOLING

This applies to homes using a ducted ASHP as their main heating and cooling system, or as part of a hybrid setup with a backup/supplemental heating source. The ASHP should switch to the backup/supplemental heating source when the temperature drops to 30 degrees or lower.

^ The Minimum Efficiencies shown to the left apply to single-stage models and also to multi-stage models based on the following calculated efficiencies:

EER = (highest rated capacity EER + lowest rated capacity EER)/2

COP = (highest rated capacity COP + lowest rated capacity COP)/2

*** EER Bonus Rebate provides an additional incentive for efficiencies above the Minimum Efficiency.**

Maximum Bonus Rebate = $200/Ton

Qualifying Water-to-Air GSHP efficiency ratings are determined using the Air-Conditioning, Heating, and Refrigeration Institute's (AHRI) directory, which may be found at www.ahridirectory.org. EER rating is at ISO 13256-1 cooling conditions of 77°F entering water temp. and 80.6°F dry bulb/66.2°F wet bulb entering air temperature (ground loop heat pump). ***A copy of the manufacturer's applicable unit rating must accompany this application.***

Qualifying Water-to-Water GSHP efficiency ratings are determined using the Air-Conditioning, Heating, and Refrigeration Institute's (AHRI) directory, which may be found at www.ahridirectory.org. EER rating is at ISO 13256-2 cooling conditions of 77°F entering water temp. and 53.6°F leaving water temperature (ground loop heat pump). ***Please include manufacturer's specification sheets verifying this information.***

Qualifying DGX GSHPs must be rated in accordance with AHRI 870 rating conditions. ***Please include manufacturer's specification sheets verifying this information.***

Primary method to HEAT your home: ❑ Electric ❑ Natural Gas/Other

Considerations:

- Work with a licensed plumber to determine if a heat pump water heater is right for your home.
- For a heat pump water heater to run efficiently, the space should generally stay above 40 degrees Fahrenheit year round.
- Since heat pumps remove heat from the ambient air, there must be a considerable amount of air available in the space. Most manufacturers recommend a minimum of 750 cubic feet, which means closets (even those with louvered doors) are usually not appropriate locations for heat pump water heaters.
- Recommended clearances should be followed to ensure adequate air circulation.
- Visit www.energystar.gov/products/hot-water-heater-replacement-guide to learn more.
