

RPU customers can receive a \$200 Electric Vehicle Enrollment Rebate when they sign-up for one of RPU's Time-of-Use Rates.

Whole House EV Time-of-Use

Customers with electric vehicles who sign up for RPU's Time-of-Use (TOU) rate will receive a one-time \$200 enrollment rebate and can benefit from charging during off-peak times. Scheduling electric vehicles to charge overnight or "off-peak" can result in saving of \$150-\$200 per year depending on number of miles driven.

- \$200 enrollment rebate
- Charging can be scheduled during off-peak times (10pm-8am) to reduce costs
- No additional metering required
- Must remain on rate for one year

BEST FOR:

- Customers who can schedule their EV to charge overnight during off-peak times (10pm-8am)
- Customers who can shift some usage to off-peak times (e.g., time delay function on appliances)
- Customers with all-electric or plug-in hybrid vehicles

NOT IDEAL FOR:

- Customers who will primarily charge their EVs during on-peak times (8am-10pm)

Separately Metered EV Service

Customers may also choose to have their electric vehicle(s) metered separately and qualify for RPU's EV TOU rate. Additional metering infrastructure is required making this a good option for new construction, homes with detached garages, or homes that require electrical infrastructure updates to support charging. Additional monthly meter fees apply.

- \$200 enrollment rebate
- Charging can be scheduled during off-peak times (10pm-8am) to reduce costs
- Must remain on rate for one year

BEST FOR:

- New construction homes
- Installations that require significant electrical upgrades
- All-electric vehicles

NOT IDEAL FOR:

- Existing homes with adequate electrical capacity
- Plug-in hybrids
